

Definitions and Information Regarding Ford Credit Causal Factors

In general, we measure year-over-year changes in Ford Credit's EBT using the causal factors listed below:

- **Volume and Mix:**
  - Volume primarily measures changes in net financing margin driven by changes in average net receivables excluding the allowance for credit losses at prior period financing margin yield (defined below in financing margin) at prior period exchange rates. Volume changes are primarily driven by the volume of new and used vehicles sold and leased, the extent to which Ford Credit purchases retail financing and operating lease contracts, the extent to which Ford Credit provides wholesale financing, the sales price of the vehicles financed, the level of dealer inventories, Ford-sponsored special financing programs available exclusively through Ford Credit, and the availability of cost-effective funding
  - Mix primarily measures changes in net financing margin driven by period-over-period changes in the composition of Ford Credit's average net receivables excluding the allowance for credit losses by product within each region
- **Financing Margin:**
  - Financing margin variance is the period-to-period change in financing margin yield multiplied by the present period average net receivables excluding the allowance for credit losses at prior period exchange rates. This calculation is performed at the product and country level and then aggregated. Financing margin yield equals revenue, less interest expense and scheduled depreciation for the period, divided by average net receivables excluding the allowance for credit losses for the same period
  - Financing margin changes are driven by changes in revenue and interest expense. Changes in revenue are primarily driven by the level of market interest rates, cost assumptions in pricing, mix of business, and competitive environment. Changes in interest expense are primarily driven by the level of market interest rates, borrowing spreads, and asset-liability management
- **Credit Loss:**
  - Credit loss is the change in the provision for credit losses at prior period exchange rates. For analysis purposes, management splits the provision for credit losses into net charge-offs and the change in the allowance for credit losses
  - Net charge-off changes are primarily driven by the number of repossessions, severity per repossession, and recoveries. Changes in the allowance for credit losses are primarily driven by changes in historical trends in credit losses and recoveries, changes in the composition and size of Ford Credit's present portfolio, changes in trends in historical used vehicle values, and changes in forward looking macroeconomic conditions. For additional information, refer to the "Critical Accounting Estimates - Allowance for Credit Losses" section of Item 7 of Part II of our 2022 Form 10-K Report
- **Lease Residual:**
  - Lease residual measures changes to residual performance at prior period exchange rates. For analysis purposes, management splits residual performance primarily into residual gains and losses, and the change in accumulated supplemental depreciation
  - Residual gain and loss changes are primarily driven by the number of vehicles returned to Ford Credit and sold, and the difference between the auction value and the depreciated value (which includes both base and accumulated supplemental depreciation) of the vehicles sold. Changes in accumulated supplemental depreciation are primarily driven by changes in Ford Credit's estimate of the expected auction value at the end of the lease term, and changes in Ford Credit's estimate of the number of vehicles that will be returned to it and sold. Depreciation on vehicles subject to operating leases includes early termination losses on operating leases due to customer default events. For additional information, refer to the "Critical Accounting Estimates - Accumulated Depreciation on Vehicles Subject to Operating Leases" section of Item 7 of Part II of our 2022 Form 10-K Report
- **Exchange:**
  - Reflects changes in EBT driven by the effects of converting functional currency income to U.S. dollars
- **Other:**
  - Primarily includes operating expenses, other revenue, insurance expenses, and other income/(loss) at prior period exchange rates
  - Changes in operating expenses are primarily driven by salaried personnel costs, facilities costs, and costs associated with the origination and servicing of customer contracts
  - In general, other income/(loss) changes are primarily driven by changes in earnings related to market valuation adjustments to derivatives (primarily related to movements in interest rates) and other miscellaneous items
